## 1. INTRODUCTION

The purpose of this study is to evaluate the existing and future traffic conditions along South Pinetree Blvd and identify roadway and intersection improvements that will allow this corridor to operate safely and efficiently for the next 20 years. As shown in Figure 1, the study corridor is South Pinetree Blvd from SR 35 (W Jackson St) east to Magnolia Road. This section of South Pinetree Blvd is located on the south side of the City of Thomasville and is approximately 1.3 miles long.

### 1.1 Study Network

This section provides a description of the roadways and intersections studied in this report.

#### Roadways

- **South Pinetree Blvd**

Within the study area, South Pinetree Blvd is an east-west, two-lane roadway with a posted speed limit of 35 MPH. This roadway serves mainly residential land uses with some institutional land uses within the corridor. The roadway consists of one travel lane in each direction with grassed shoulders. There is a gated, at-grade railroad crossing on the eastern end of the corridor.

- **SR 35/US 319 (W Jackson Street)**

SR 35 serves as the western terminus of the study corridor. SR 35, in this location, is a north-south, five-lane arterial with a 45 MPH posted speed limit. SR 35 serves as the primary arterial roadway connecting Thomasville with Tallahassee to the south.

- **Magnolia Road**

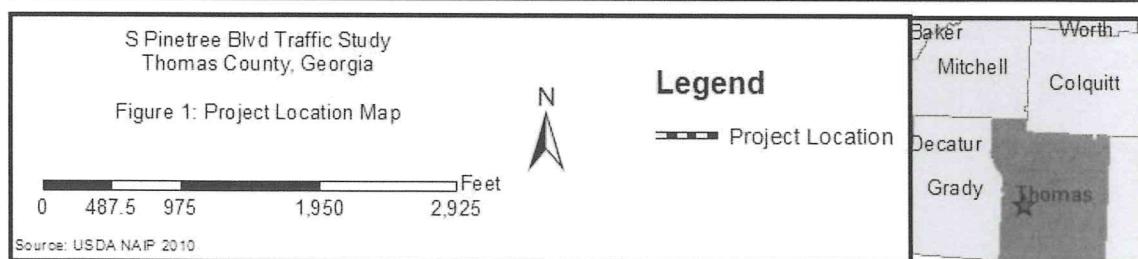

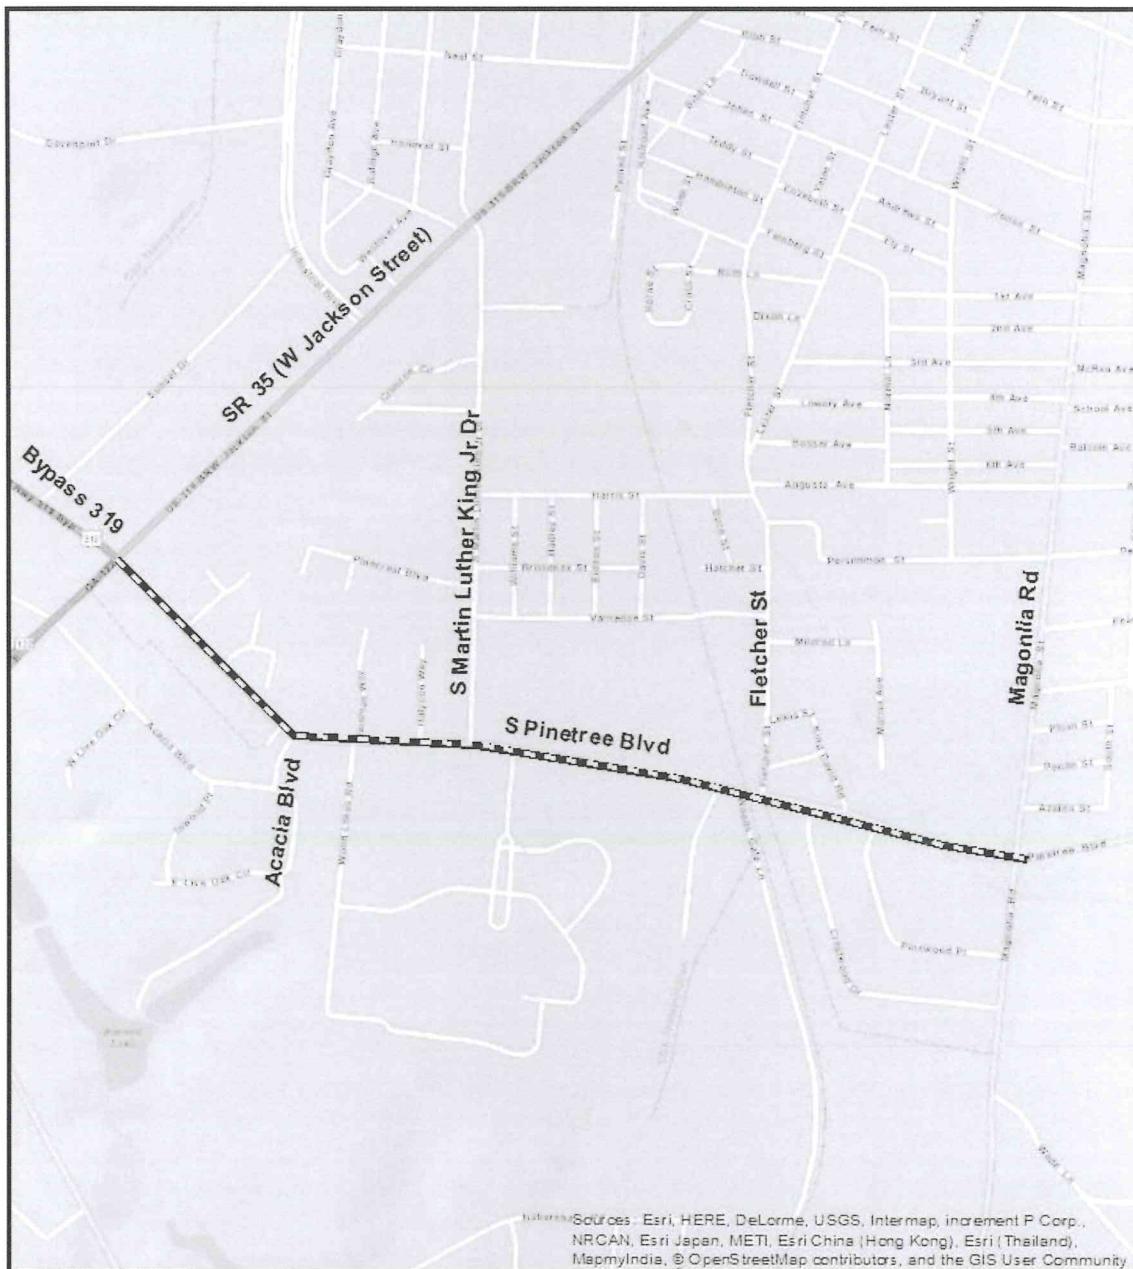

Magnolia Road serves as the eastern terminus of the study corridor. Magnolia Road is a north-south two lane roadway with a 35 MPH posted speed limit. Magnolia Road provided north-south access to and from Thomasville.

#### Intersections

- **S Pinetree Blvd at SR 35**

The intersection of S Pinetree Blvd and SR 35 is signalized with left-turn bays and signal phases on SR 35. The intersection contains right turn lanes on the eastbound and northbound approaches. The westbound leg of S Pinetree Blvd has a single lane to serve left, through, and right turning traffic.

**Figure 1: Site Location Map**

- **S Pinetree Blvd at Acacia Blvd**

The intersection of S Pinetree Blvd and Acacia Blvd is unsignalized with stop sign control on Acacia Blvd. There are no dedicated turn lanes at this intersection. Acacia Blvd serves a residential area on the south side of the project corridor.

- **S Pinetree Blvd at S Martin Luther King Drive**

The intersection of S Pinetree Blvd and S Martin Luther King Drive is unsignalized with stop sign control on S Martin Luther King Dr. There are no dedicated turn lanes at this intersection. S Martin Luther King Drive provides access to residential and commercial areas to the north as well as downtown Thomasville.

- **S Pinetree Blvd at Fletcher Street**

The intersection of S Pinetree Blvd and Fletcher Street is unsignalized with stop sign control on Fletcher Street. There are no dedicated turn lanes at this intersection. Fletcher Street provides access to residential areas to the north as well as downtown Thomasville.

- **S Pinetree Blvd at Magnolia Street**

The intersection of S Pinetree Blvd and Fletcher Street is unsignalized with stop sign control on all approaches. There are no dedicated turn lanes at this intersection.

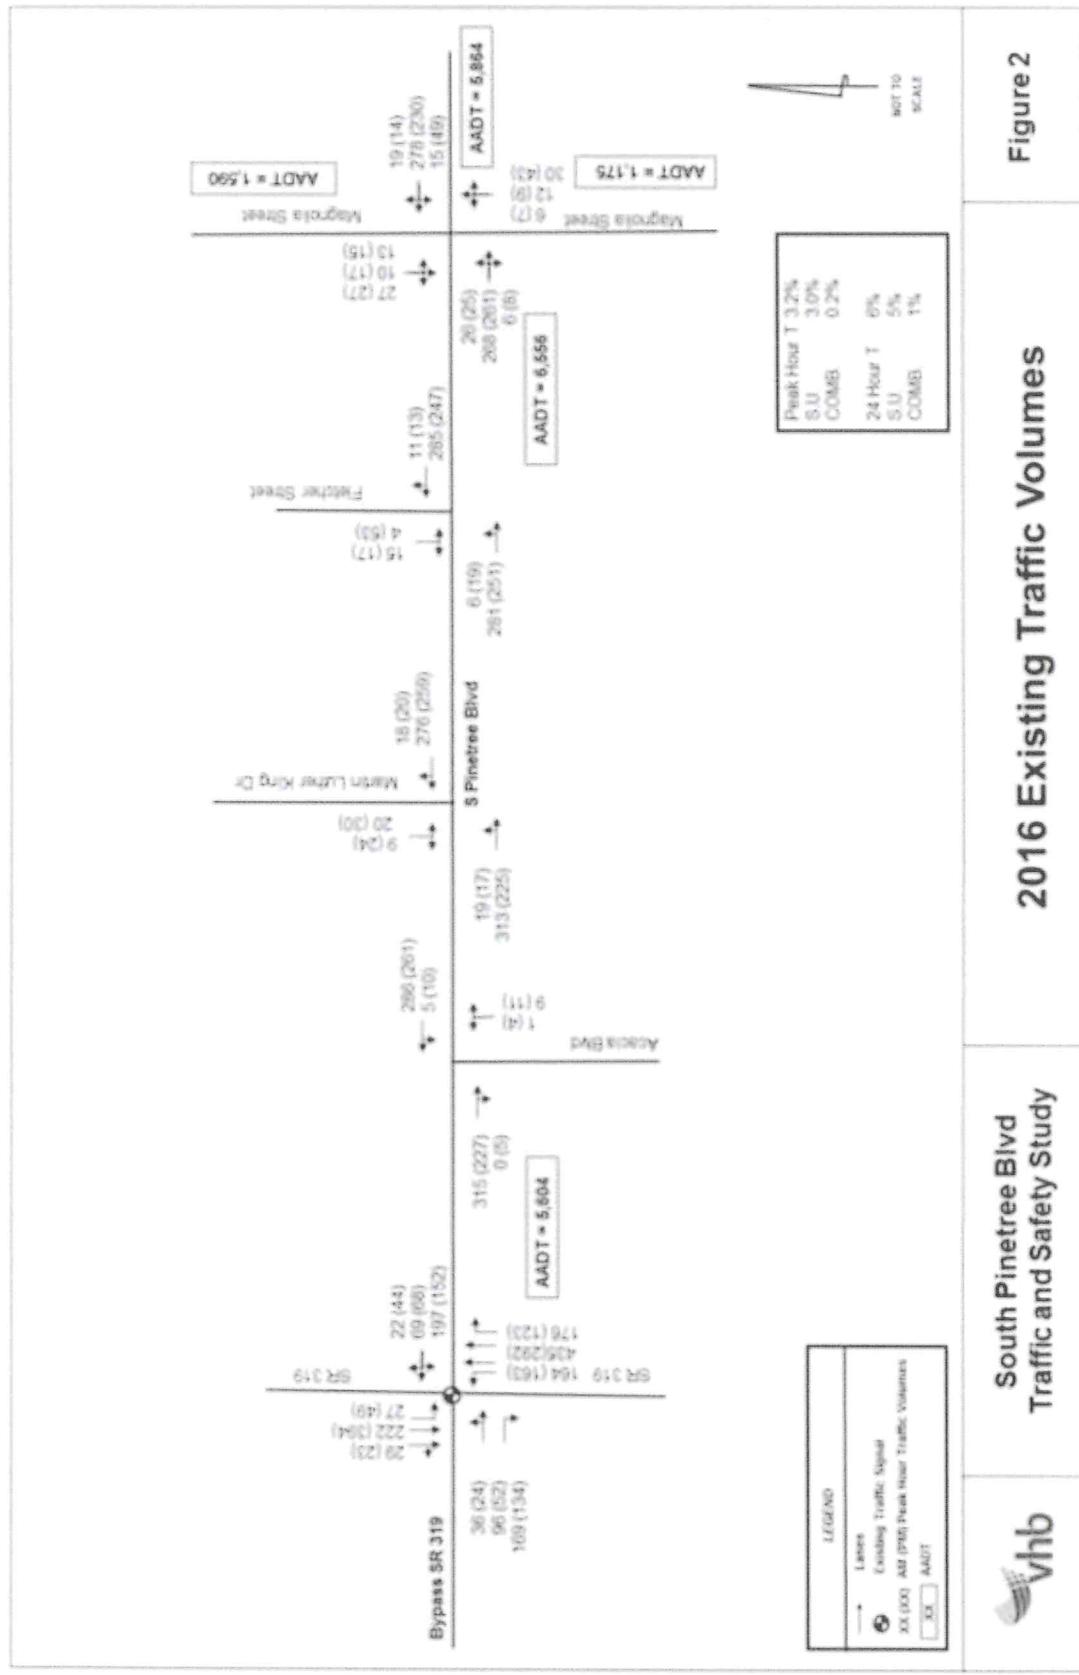

## 2. TRAFFIC ANALYSIS

Existing traffic volumes were collected during the month of January 2016. Traffic counts were taken at all study intersections for both the morning peak period (7:00 - 9:00 a.m.) and evening peak period (5:00 - 7:00 p.m.). 24-hour daily traffic counts were taken on study area roadway as well. A 24-hour classification count was also taken on S Pinetree Blvd to determine the percent of trucks using the corridor. The Existing (2016) traffic volumes are presented in Figure 2. This figure also presents the truck percentages along the corridor. All traffic counts are contained in Appendix A.

### 2.1 Analysis Methodology

A capacity analyses was conducted at all study intersections using Synchro Professional, Version 9.0. The results of the capacity analysis are presented using Level of Service (LOS) and average intersection vehicle delay. LOS and delay are used to describe the operating characteristics of a road segment or intersection in relation to its capacity. LOS is defined as a qualitative measure that describes operational conditions of a transportation facility. The Highway Capacity Manual defines LOS with a letter designation on a declining scale from A to F. LOS "A" represents free-flow conditions and LOS "F" represents extreme delays with stopped traffic conditions. While LOS is a qualitative measure, average intersection vehicle

**Figure 2: Existing (2016) Traffic Volumes**

delay is utilized to provide a quantitative measure of intersection operations. Each LOS represents a range of intersection delay. The results of this analysis will be provided in LOS and delay.

LOS standards are used to describe the maximum acceptable level of traffic operations in a given area. LOS standards are generally set by local governments and can vary between jurisdictions. Georgia DOT defines LOS D as the maximum acceptable LOS for urbanized areas and LOS C for rural areas. Since the study corridor is on the edge of an urbanized area, with rural areas to the south, LOS C was utilized as the LOS standard to define acceptable traffic operations.

## 2.2 Existing (2016) Traffic Conditions

The AM and PM Existing LOS and delay results for all study intersection are presented in Table 1. Since the S Pinetree Blvd intersections at Acacia Blvd, S. Martin Luther King Drive, and Fletcher Street are unsignalized and stop sign controlled on the side streets, the LOS and delay values in the table are given for the stop sign controlled minor street. As shown in this table, all intersections currently operation at acceptable (LOS C or better) conditions in the 2016 AM and PM peak hours.

**Table 1: Existing (2016) Intersection Level of Service**

Intersection		Control	Peak Hour Level of Service (intersection delay in seconds/vehicle)	
			AM	PM
1	S. Pinetree Blvd at SR 35	Signal	C (26.3)	C (22.9)
2	S. Pinetree Blvd at Acacia Blvd	NB Stop Control*	B (11.2)	B (10.6)
3	S. Pinetree Blvd at S Martin Luther King Drive	SB Stop Control*	C (16.0)	B (12.8)
4	S. Pinetree Blvd at Fletcher Street	SB Stop Control*	B (11.6)	B (14.2)
5	S. Pinetree Blvd at Magnolia Street	All-Way Stop Control	A (9.4)	A (9.3)

\*LOS and delay given for stop sign controlled approach.

## 2.3 Future (2036) Traffic Conditions

This traffic study utilizes 2036 as the future analysis year. A 20-year design horizon is typically used for transportation projects to ensure the benefit of any improvements will remain viable in the foreseeable future. Improvements must provide acceptable LOS throughout this design horizon to as to be considered a prudent expenditure of limited transportation funds.

### 2.3.1 Background Traffic Growth

In order to forecast traffic conditions in 2036, a linear regression analysis was conducted using GDOT historical traffic counts for the major area roadways to determine the overall traffic growth trend for the study area. Table 5 gives historical average annual daily traffic (AADT) counts within the project area between 2010 and 2014 (most recent counts available). Traffic growth rates between 2004 and 2009 were not utilized as they show significant reductions in traffic volumes, most likely due to the economic downturn during that period. The results of the regression analysis show some decreasing and some increasing traffic volume trends in the study area. There is very little overall growth. It is unlikely that traffic will continue to show this slight decline over the next 20 years, therefore a 1% annual traffic growth rate was applied to the existing traffic volumes to develop future (2036) traffic volumes. The future (2036) traffic volumes are presented in **Figure 3**.

**Table 2: Historical Traffic Growth Rates on Area Roadway**

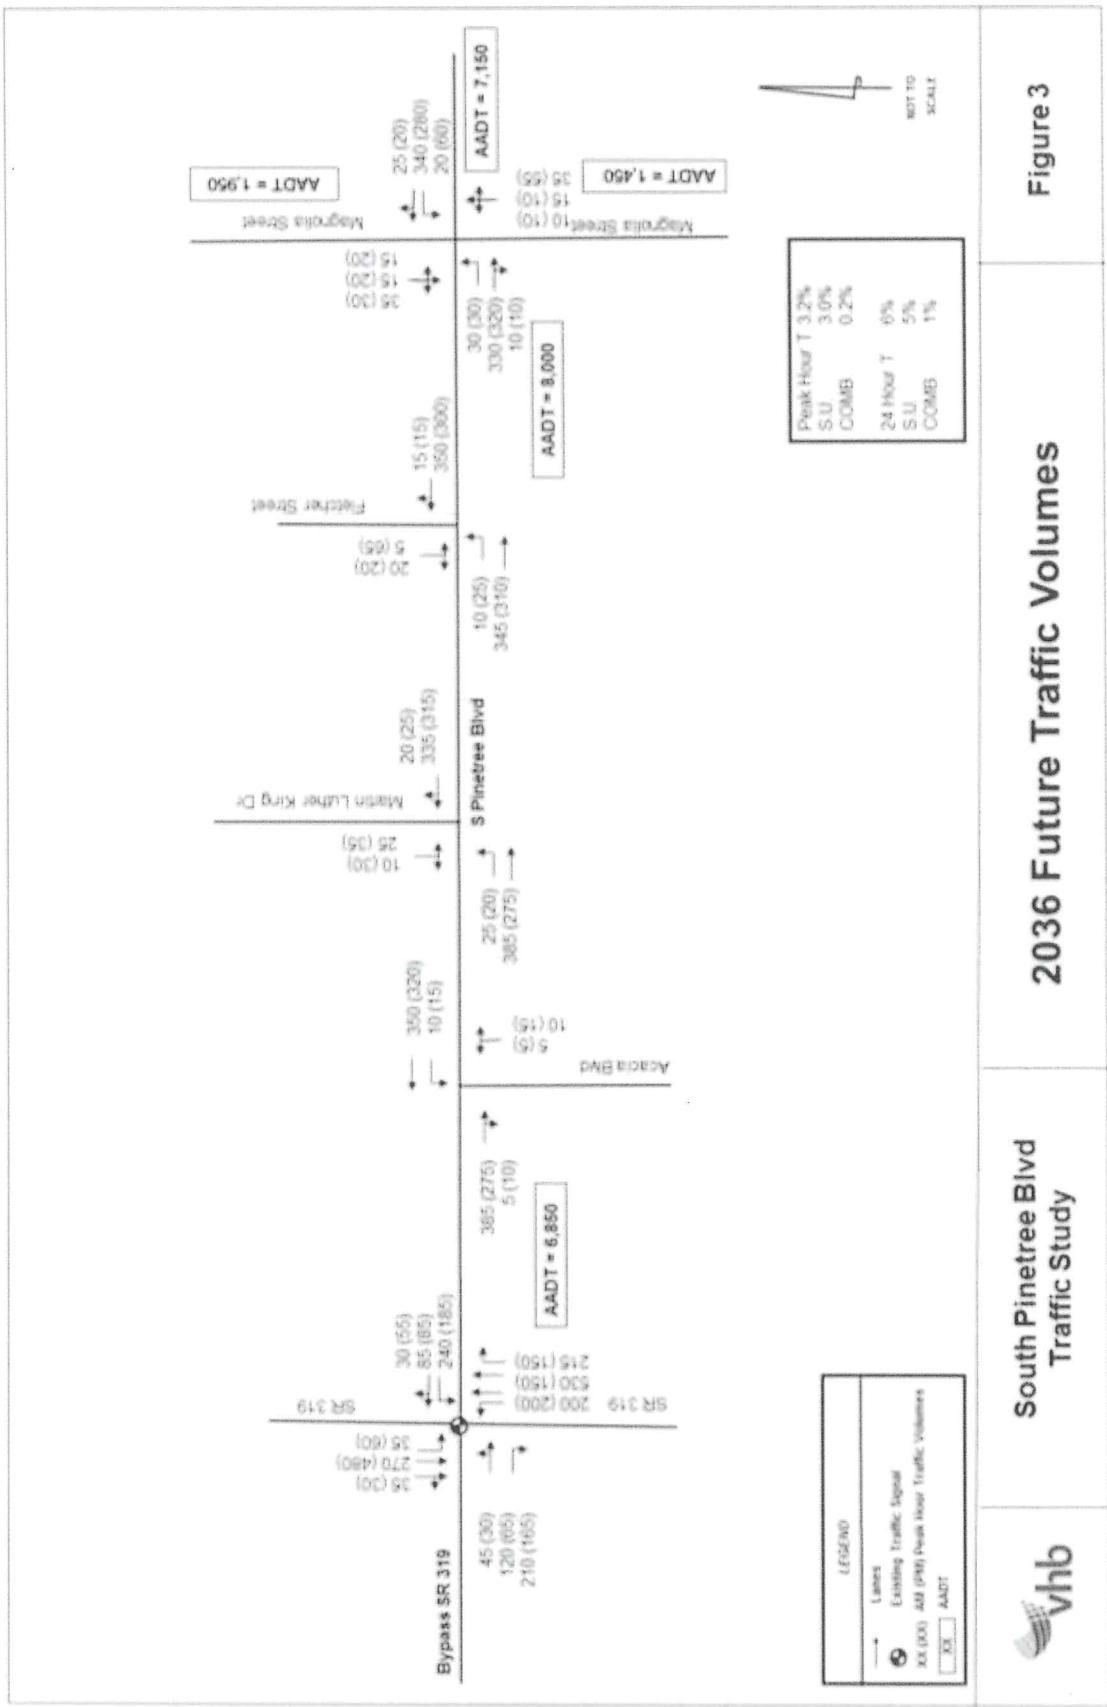

TC Station	Location	2010	2011	2012	2013	2014	Calculated Growth Rate
2750006	Bypass US 318	5,280	5,610	5,640	5,450	5,450	0.3%
2750003	SR 319	10,150	9,390	9,430	9,400	9,400	-1.5%
2750501	S Pinetree Blvd	4,840	4,760	4,780	5,600	5,600	4.6%
2750607	S MLK Dr	1,320	1,300	1,300	1,260	1,260	-1.2%
2750503	S Pinetree Blvd	5,330	5,240	5,260	5,270	5,000	-1.2%
2750481	Magnolia St	1,040	1,020	1,030	1,180	1,180	4.1%
2750505	S Pinetree Blvd	5,420	4,790	4,810	4,820	4,820	-2.3%
		33,380	32,110	32,250	32,980	32,710	-0.1%

### 2.4 Future (2036) LOS Analysis

As with the existing condition, a capacity analysis was prepared for the future (2036) traffic conditions. The future traffic volumes were analyzed for two scenarios: The 2036 No-Build scenario analyzed the S Pinetree Blvd corridor with no roadway or intersection improvements. Table 3 presents the results of the 2036 No-Build analysis. The 2036 Build scenario analyzes the intersections assuming the proposed roadway and intersection improvements along the corridor. These improvements include the addition of a two-way center turn lane for the length of the project. This allows for dedicated left turn lanes on S Pinetree Blvd at all intersections. Table 4 presents the results of the 2036 Build analysis.

The results of the 2036 No-Build analysis show that the average vehicle delay at all intersections increases between 2016 and 2036 and several intersections experience a worsening in LOS. However, all intersections are still expected to operate at LOS C or better.

**Figure 3: Future (2036) Traffic Volumes**

**Table 3: 2036 No-Build Intersection Level of Service**

Intersection		Control	Peak Hour Level of Service (intersection delay in seconds/vehicle)	
			AM	PM
1	S. Pinetree Blvd at SR 35	Signal	C (32.8)	C (24.6)
2	S. Pinetree Blvd at Acacia Blvd	NB Stop Control*	B (14.3)	B (11.3)
3	S. Pinetree Blvd at S Martin Luther King Drive	SB Stop Control*	C (20.6)	B (14.7)
4	S. Pinetree Blvd at Fletcher Street	SB Stop Control*	B (12.8)	C (17.4)
5	S. Pinetree Blvd at Magnolia Street	All-Way Stop Control	B (10.6)	B (10.3)

**Table 4: 2036 Build Intersection Level of Service**

Intersection		Control	Peak Hour Level of Service (intersection delay in seconds/vehicle)	
			AM	PM
1	S. Pinetree Blvd at SR 35	Signal	C (25.4)	C (23.1)
2	S. Pinetree Blvd at Acacia Blvd	NB Stop Control*	B (14.3)	B (11.3)
3	S. Pinetree Blvd at S Martin Luther King Drive	SB Stop Control*	C (20.5)	B (14.6)
4	S. Pinetree Blvd at Fletcher Street	SB Stop Control*	B (12.8)	C (17.3)
5	S. Pinetree Blvd at Magnolia Street	All-Way Stop Control	B (10.8)	B (10.3)

The results of the 2036 Build analysis show an improvement in average vehicle delay for most intersections when compared to the No-Build. Intersection LOS stays the same compared to the No-Build. The roadway improvements do allow the signalized intersection of S Pinetree Blvd and SR 35 to operate with less delay than in the Existing (2016) conditions in the AM peak hour.

## 2.5 Improvements to Intersection of S Pinetree Blvd @ Magnolia Street

Since the intersection of S Pinetree Blvd and Magnolia Street currently operates under 4-way stop control, improvements to this intersection were studied in order to identify if alternative

traffic control could reduce vehicle delay for users of this intersection. 24-hour traffic counts were taken on all four approaches on the intersection in order to study the possible signalization of this intersection. A signal warrant analysis was prepared for the intersection for the existing (2016) and future (2036) conditions to determine if a signal is warranted under existing or future conditions. The results of this analysis show that the intersection volumes, under either existing or future conditions, do not meet any warrants for signalization. The signal warrant analysis for 2016 and 2036 is presented in Appendix B.

Since the implementation of a traffic signal at this intersection is not warranted, a roundabout was analyzed as an alternative traffic control measure to reduce delay and allow for improved operation at this intersection. The GDOT Roundabout Analysis Tool was utilized to analyze the operation of a single lane roundabout in this location. The GDOT Roundabout Tool is based on the 2010 Highway Capacity Manual methodology and the National Cooperative Highway Research Program (NCHRP) Report 672 – FHWA's Roundabout Informational Guide.

Table 5 presents the results of the roundabout analysis for the intersection of S Pinetree Blvd @ Magnolia St in 2016 and 2036 for both AM and PM peak hours. As presented in this table, a roundabout would allow all intersection approaches to operate at LOS A with very low delay. While traffic utilizing 4-way stop control at this intersection is not expected to experience long delays, the implementation of a roundabout would reduce delay and improve LOS for traffic using this intersection.

**Table 5: S Pinetree Blvd at Magnolia Street - Roundabout Analysis**

Intersection Approach		Control	2016 Peak Hour Level of Service (Approach delay in seconds/vehicle)		2036 Peak Hour Level of Service (Approach delay in seconds/vehicle)	
			AM	PM	AM	PM
1	Magnolia St Northbound	Roundabout	A (4.0)	A (5.0)	A (5.0)	A (5.0)
2	Magnolia St Southbound	Roundabout	A (5.0)	A (4.0)	A (5.0)	A (5.0)
3	S Pinetree Blvd Eastbound	Roundabout	A (6.0)	A (6.0)	A (6.0)	A (7.0)
4	S Pinetree Blvd Westbound	Roundabout	A (6.0)	A (6.0)	A (7.0)	A (6.0)

### 3. CRASH ANALYSIS

Crash data was obtained from GDOT for the study corridor for the most recent reported three years (2012-2014). This data was analyzed in order to identify the type and severity of accidents in the corridor and determine if proposed roadway improvements could improve corridor safety. Table 6 presents the total crashes, injuries, and fatalities along the corridor between 2012 and 2014. Table 7 presents a breakdown of the type of crashes that occurred during this period.

As presented in these tables, the corridor experienced an average of 10 crashes per year for the three study years. A review of the crash data reveals that rear end and angle crashes are the most common within the corridor. By separating left turning traffic from through traffic, the proposed improvements to S Pinetree Blvd would help reduce rear end crashes. A detailed review of the crash data revealed that the two fatalities that occurred in 2012 were in the same crash, and that crash was a collision with a tree. The review also showed that no crashes were associated with the at-grade railroad crossing on the corridor.

**Table 6: S Pinetree Blvd Study Area - Average Crash Data**

Year	Total Crashes	Total Injuries	Total Fatalities
2012	10	5	2
2013	11	0	0
2014	9	0	0
Average	10	2	1

**Table 7: S Pinetree Blvd Study Area - Crash data by Collision Type**

Collision Type	2012		2013		2014	
	Number	Percent	Number	Percent	Number	Percent
Angle	2	20%	3	27%	3	33%
Rear End	4	40%	3	27%	4	44%
Sideswipe	1	10%	0	0%	1	11%
Head On	0	0%	1	9%	1	11%
Other	3	30%	4	36%	0	0%
<b>Total</b>	<b>10</b>		<b>11</b>		<b>9</b>	

## 4. CONCLUSIONS/RECOMMENDATIONS

The results of this traffic and safety study indicate the corridor currently operates at an acceptable LOS under existing conditions. The LOS and delay at study area intersections is not expected to worsen significantly by 2036. While the corridor is not expected to experience significant traffic congestion by 2036, the implementation of a continuous two-way center turn lane will reduce delays for users of the corridor. Furthermore, with the majority of crashes in the corridor being rear end crashes, the center turn lane will improve safety by separating left turning traffic from through traffic on S Pinetree Blvd.

An analysis of the S Pinetree Blvd at Magnolia St intersection reveals that a traffic signal is not warranted at this location under existing or future conditions. While traffic operations at this location are expected to be acceptable in the future without any improvements, a roundabout analysis shows that a roundabout would reduce delays for vehicles travelling through this intersection.

A review of the right turning volumes at study intersections, both under existing and future conditions, does not indicate a need for right turn lanes at these intersections. While right turn lanes may not be necessary to maintain acceptable traffic operations, their implementation would improve traffic flow and safety by separating right turning traffic from through traffic along the corridor.

<b>Warrant 1: Eight-Hour Vehicular Volume</b>													
<input type="checkbox"/>													
1 A. Minimum Vehicular Volumes (Both major approaches --and-- higher minor approach) --or--													
<input type="checkbox"/>													
1 B. Interruption of Continuous Traffic (Both major approaches --and-- higher minor approach) --or--													
<input type="checkbox"/>													
1 (80%) Vehicular --and-- Interruption Volumes (Both major approaches --and-- higher minor approach)													
<input type="checkbox"/>													
<b>Warrant 2: Four-Hour Vehicular Volume</b>													
<input type="checkbox"/>													
2 A. Four-Hour Vehicular Volumes (Both major approaches --and-- higher minor approach)													
<input type="checkbox"/>													
<b>Warrant 3: Peak Hour</b>													
<input type="checkbox"/>													
3 A. Peak-Hour Conditions (Minor delay --and-- minor volume --and-- total volume ) --or--													
<input type="checkbox"/>													
3 B. Peak- Hour Vehicular Volumes (Both major approaches --and-- higher minor approach)													
<input type="checkbox"/>													
<b>Warrant 4: Pedestrian Volume</b>													
<input type="checkbox"/>													
4 A. Four Hour Volumes --or--													
<input type="checkbox"/>													
4 B. One-Hour Volumes													
<input type="checkbox"/>													
<b>Warrant 5: School Crossing</b>													
<input type="checkbox"/>													
5. Student Volumes --and--													
<input type="checkbox"/>													
5. Gaps Same Period													
<input type="checkbox"/>													
<b>Warrant 6: Coordinated Signal System</b>													
<input type="checkbox"/>													
6. Degree of Platooning (Predominant direction or both directions)													
<input type="checkbox"/>													
<b>Warrant 7: Crash Experience</b>													
<input type="checkbox"/>													
7 A. Adequate trials of alternatives, observance and enforcement failed --and--													
<input type="checkbox"/>													
7 B. Reported crashes susceptible to correction by signal (12-month period) --and--													
<input type="checkbox"/>													

7 C. (80%) Volumes for Warrants 1A, 1B --or-- 4 are satisfied	<input type="checkbox"/>
<b><i>Warrant 8: Roadway Network</i></b>	<input type="checkbox"/>
8 A. Weekday Volume (Peak hour total --and-- projected warrants 1, 2 or 3) --or--	<input type="checkbox"/>
8 B. Weekend Volume (Five hours total)	<input type="checkbox"/>
<b><i>Warrant 9: Grade Crossing</i></b>	<input type="checkbox"/>
9 A. Grade Crossing within 140 ft --and--	<input type="checkbox"/>
9 B. Peak-Hour Vehicular Volumes	<input type="checkbox"/>
